

GTS Transport

In the following GermanTwinscrewS GmbH is named GTS.

GTS delivers all goods with size for forwarding by our forwarder Hermes Shipping and Airfreight GmbH. For more than 10 years of cooperation we have positive experiences with the transport to the global market. All shipments of documents or small packages are transferred by TNT. GTS would be pleased to give you tracking information, so you can follow the way of your ordered goods.

GTS delivers goods to our international customers with different conditions. All transports are made according to save rules and routes of transport, always in consideration of our environment. Following focus is part of GTS transport

Packing

Twin screws and barrels and other heavy parts for machinery are always packed in seaworthy fumigated wooden boxes. This guarantees the damage-free transport and save arrival at our customers. All metal parts are impregnated against corrosion. Bigger machinery is forwarded in sealed overseas container.

Clearance formalities

The clearance takes place at GTS side by presentation to custom according to all regulations of clearance. Our customers in countries with agreement will receive ATR documents, so the import duty will be as low as possible.

Insurance

As a standard all transports will be insured with 110% of invoice value. Usually the insurance is made in the name of the customer.

Terms of transport

Basically all GTS terms of delivery are valid for all transports according to incoterms 2010ff. Following transport facilities are offered by GTS.

- EXW (ex works) GTS delivers ex work into the responsibility of the buyer or to a more specifically detailed address. In this case the buyer has to load the goods by himself and also has to care about all formalities of export.
- FCA (free carrier) GTS delivers the goods to a forwarder or to another person named by the buyer. In this case the clearance will be made by GTS.
- CIP (carriage and insurance paid) GTS pays for freight and insurance. GTS delivers the goods to a forwarder, who transports the goods to the address named by the buyer. This is the common condition for transport by plane.
- FOB (free on board) GTS delivers the goods aboard a ship. The passage of risk is the board wall, where the responsibility is on buyer's hand.
